From your Stash:

- Lightweight Beading Wire
- Two part epoxy glue
- 2 – 4mm crystals
- 2 – Crimp tubes

Tools Needed:

- Wire Cutters
- Crimp tool

© Nora Farnsworth 2015

Instructions:

1. Leaving the beading wire on the spool, start stringing with a 4mm crystal, then string a 6mm glass pearl followed by a 6mm crystal. Continue stringing, alternating a 6mm glass pearl and 6mm crystal until you have reached 24". End with the 4mm crystal.
2. Cut the beaded strand from the spool leaving a 4" tail on either end. Form a small loop and secure it with a crimp tube. Repeat with the other side.
3. Holding the Galaxy Hollow Tube in one hand, and letting it hang down, ease the strand of beads into the tube. Position the strand of beads so that it is evenly distributed in the hollow tube. With your fingers twist the Galaxy Hollow Tube at each end, right up to the 4mm crystal, to capture the beads in the hollow tube. Leave the beads on the wire. Measure the depth of the clasp to determine the length you will need to insert into the clasp – in this case it's ¼ inch. Clip off the excess beading wire leaving, ¼ inch to insert into the clasp. Follow the manufactures' instructions for mixing the two-part epoxy. Fill the clasp ½ full with epoxy glue and insert the end into the clasp. Repeat with the other side. Let rest and cure according to the manufactures directions.

Note: The Galaxy Hollow Tube is very supple and can acquire small dents if not treated gently. I recommend leaving it in the package until ready to use.
